GENERAL NOTES ON MEASURING ROOFS:

Flat Roofs

If the roof is flat or has no more than a 3 in 12 pitch, calculate its total square footage by simply multiplying the length by the width.

A Square is equal to 100 Square Feet.

Sleeper Roofs

Measure the structure at ground level and add the roof's overhang. As an example, if the roof overhang is 12 inches, add 2 feet to the overall length and 2 feet to the overall width. The total nominal square footage is multiplied by a factor associated with the roof's pitch.

Pitch Multiply by:

- | | |
|----------|------|
| 4 in 12 | 1.06 |
| 5 in 12 | 1.08 |
| 6 in 12 | 1.12 |
| 7 in 12 | 1.16 |
| 8 in 12 | 1.20 |
| 9 in 12 | 1.25 |
| 10 in 12 | 1.30 |
| 11 in 12 | 1.36 |
| 12 in 12 | 1.42 |
